Nature is like a magical journey that transforms with every step.

Travel to **Borneo's Rain Forests**, which offer a lush and humid habitat to some very noisy residents! Then brave the **Namib Desert**—a dry, barren landscape where many have set up home.

In the **Pacific Ocean** you'll find animals living in some of the deepest, darkest waters on Earth. While the **Black Forest** in Germany—a dark, mystical place—is a haven for many woodland creatures.

You'll find wildlife thriving in the harshest conditions, from the top of the **Andes Mountains** to the windswept moors below, while the warm **Natural Springs** of Florida are the perfect place for animals to laze and lounge.

Open the pages of this stunning book to discover the changing face of nature . . . .

# INCREDIBLE RAIN FOREST

The vast island of Borneo is famous for its tropical rain forests, which are home to an amazing world of wildlife. Travel down from the tops of the trees to see its wonders appear.

## EMERGENT LAYER

At the top of towering trees, settling fog provides water for the creatures and plants at the roof of the forest.

The **yellow meranti tree** has lightweight seeds that spin like helicopters all the way to the forest floor.

**Giant honeybees** build their nests far off the ground in the **tualang tree**, also known as "the tree of swarming bees."

The **long-tailed parakeet** is a very sociable animal that sometimes lives in a flock of thousands!

**Dawn bats** travel many miles to feed on pollen and nectar from plants that flower during the night.
